

Pin Oak (*Quercus palustris*)

Alex X. Niemiera, Professor, School of Plant and Environmental Sciences, Virginia Tech

Summary:

Foliage: Deciduous broadleaf

Height: 70 feet

Spread: 40 feet

Shape: Upright pyramidal in youth, oval at maturity This large oak has wine-red foliage in the fall.

Plant Needs:

Zone: 4 to 8

Light: Partial shade to full sun

Moisture: Wet to moist to average

Soil Type: Sandy, loam, or clay

pH Range: 3.7 to 6.0

Functions:

Suggested uses for this plant include shade and specimen plant.

Planting Notes:

Readily transplants due to fibrous root system.

Prefers moist, rich, well-drained acid soil and full sun. Do not plant in high pH or compacted soils.

Tolerates wet, clay soils.

Care:

Prune to establish one central leader (trunk).

Problems:

Grows poorly in alkaline and compacted soils.

Alternatives:

Consult local garden centers, historic or public gardens and arboreta regarding cultivars and related species that grow well in your area.

Cultivars of *Quercus palustris*:

`Sovereign' has lower branches that do not droop.

`Crownright' is similar to the `Sovereign', but with a more narrow and upright shape.

Comments:

In about the first thirty years, the branching habit of the native pin oak is truly unique. The upper branches are ascending, the middle ones horizontal, and the lower ones drooping. The drooping

lower branches make pin oak a poor street tree. It is better placed in locations where the lower branches will not be a nuisance.
Suitable for bonsai.

This material was developed by Carol Ness as part of the Interactive Design and Development Project funded by the Kellogg Foundation.
